EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Raymond Ferrera on 3/2/05.

In the claims:

1 (Currently amended) An apparatus for securing a box cover to a meter box, said apparatus comprising:

a clamping member, an engagement member, wherein said [clamping member] engagement member further comprises a clamp, a clamp actuating member, and a fastening shelf having a first securing means; and a lock housing having a second securing means.

8 (Currently amended) The apparatus of claim 1, wherein said clamp actuating member rotates about a rotational axis established by disposition of [an] said engagement member on a body portion of said clamping member.

10 (Currently amended) The apparatus of claim 8, wherein one end of said clamp actuating member receives an input force and rotates about an axis established by disposition of [an] said engagement member disposed on said clamping member, and

Art Unit: 2831

then translates a mechanical force to an opposite end of said clamp actuating member that is greater than the input force.

15 (Currently amended) A method for securing a box cover to a meter box, said method

Comprising:

disposing a clamping member over a wall portion of said meter box, disposing an engagement member on a body portion of said clamping member, wherein said clamping member comprises a clamp, a clamp actuating member, and a fastening shelf having a first securing means; disposing a lock housing in functional cooperation with said clamping member, wherein said lock housing comprises a second securing means; and securing said clamping member using said lock housing.

21 (Currently amended) The method of claim 15, further comprising rotating said clamp actuating member about a rotational axis established by disposition of [an] said engagement member disposed on [a] said body portion of said clamping member.

22 (Currently amended) The method of claim 21, further comprising:

delivering an input force to one end of said clamp actuating member so that said clamp actuating member rotates about a rotational axis established by disposition of [an] said engagement member on said clamping member; and translating said input force into a mechanical clamping force that is greater than the input force.

2. Cancel claim 27.

Art Unit: 2831

3. ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: The primary reasons for the indication of the allowability of claims 1-26 are the inclusion therein, in combination as currently claimed, of the limitation of a clamping member, an engagement member, wherein said engagement member further comprises a clamp, a clamp actuating member, and a fastening shelf having a first securing means; and a lock housing having a second securing means (for claims 1-14), and claims 15-26 are method counter part of product claims 1-14.

The previously listed limitation is neither disclosed nor taught by the prior art of record, alone or in combination.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Other prior art cited

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fisher, Shallbetter, Eickman, Fennel, Sloop, Byrd, Howell, Byrd, Newman, Green, Soyfertis, Jeon and Grday disclose a meter box similar to applicant's claimed invention.
